

WeRoam broadens its WLAN roaming footprint in Asia

Berne, 16th February 2005. WeRoam, the global public WLAN solution provider, announced the recently signed agreement with Airborne Access Corporation, a WLAN operator based in the Philippines, during the 3GSM World Congress in Cannes.

The desire of the Asian GSM Mobile Operators to compliment and enhance their domestic GPRS and UMTS services with a global WLAN solution, together with the launch this year of the latest WiFi enabled mobile phones, have been the catalyst for WeRoam's expansion of its Asian hotspot coverage.

WeRoam's authentication and clearing platform provides WLAN users with secure and fully audited, wireless Internet access through SIM, EAP-SIM and Username/Password authentication. In addition, the WeRoam Connection Manager frees the user from the complexity of accessing the Internet while traveling, with a built in WeRoam hotspot database and full management of available mobile data networks, be it WLAN, GPRS and UMTS.

"WeRoam are looking to partner with the market leading WLAN Operators in SE Asia to provide the necessary coverage for our GSM Mobile and Enterprise customers based in the region. Airborne Access was the obvious choice in the Philippines. Their quality hotspot footprint, technical understanding and support of our SIM based WLAN roaming solution were key factors in forming the partnership" said Justin Farnell, WeRoam International Sales Director.

About WeRoam

WeRoam follows a vision of simplicity for global WLAN roaming. Whether using Web landing page, smart client software, username/password or SIM authentication, the user experience is uniform. WeRoam's open Roaming Platform, a fusion of GSM and IP technologies, offers today a worldwide footprint through its more than 40 network partners connected. All solutions easily integrate with existing services of 2G/3G operators, ISP's and Enterprises. For more information please visit: www.weroam.com

About Airborne Access Corporation

Airborne Access (www.airborneaccess.net), founded in 2002, is the Philippines' largest Wi-Fi hotspot operator providing wireless broadband internet access in public locations such as airports, malls, coffee shops, and restaurants. Airborne Access now has 85 hotspots in its Wi-Fi network, covering most of Metro Manila and including key cities like Baguio, Cebu, Boracay and San Fernando, La Union
